

Tommaso Cortonesi

SOFTWARE ARCHITECT

 j4bberwocky

|  tommaso-cortonesi

Summary

Lead Product & Application Architect at Wolters Kluwer (CCH Tagetik) with 16+ years of experience in the banking and finance industry, I treat architecture as a living system. I focus on turning complexity into clarity—building what's needed now and designing for what changes next to deliver pragmatic, evolvable systems with confidence.

Experience

CCH Tagetik (Wolters Kluwer)

Lucca

LEAD APPLICATION & PRODUCT ARCHITECT

2025 – present

I own cross-team architecture in a SAFe org (Solutions + Reporting, 7 teams) for a multi-tenant SaaS platform, applying secure-by-design in partnership with the SOC team.

- I designed the integration of licensed third-party libraries to serve three deployment models (SaaS, BYOC and on-prem) from a single architecture, favoring substitutability over deployment-specific forks.
- I defined and drove a cross-team technical-debt remediation plan, sequencing payback against delivery to keep refactoring sustainable.
- I re-architected an agentic document pipeline by extracting deterministic OCR (Tesseract + PDFBox) into a dedicated microservice instead of one centralized LLM agent (halving production token cost and cutting end-to-end latency ~40%) keeping deterministic and probabilistic components clearly separated.

GFT @ Allitude - Core Banking Modernization

Trento

LEAD SOLUTION ARCHITECT

2024 – 2025

I led the modernization of core-banking / Wealth Management services for the banking consortium, coordinating 3 solution architects.

- I integrated modernized microservices with legacy systems through an incremental, strangler-style approach, designing for replaceability over big-bang rewrite, and using BIAN to keep business domains interchangeable.

GFT @ Intesa Sanpaolo - Data Governance Portal 2.0

Turin

SOLUTION ARCHITECT

2022 – 2024

I led the redesign of a bank's data-governance platform across distributed multi-country teams in a regulated environment.

- I designed a self-registering batch framework (Spring Batch) that centralized job lifecycle, scheduling, monitoring and inter-job dependency control (semaphore), so new jobs only implement their own logic - the suite grew from 4 to ~25 heterogeneous jobs with near-zero per-job integration effort.
- I left a healthy, self-sustaining platform still in active production after my departure, designed to outlive its architect.

Engineering @ Municipality of Florence - Environmental Permits

SOLUTION ARCHITECT

2019 – 2021

I architected and led (team of 4) a web application for building and environmental permits, on the Spring ecosystem with Activiti (BPM) and Alfresco.

Engineering @ Banca Mediolanum

SENIOR SOLUTION DEVELOPER & TEAM LEADER

2015 – 2019

My first leadership role: I led an 8-person team through a COBOL-to-Java transition, planning delivery and interfacing directly with management, architects, bank stakeholders and vendors; also my first hands-on exposure to DevOps.

Early Career

SOLUTION DEVELOPER

2010 – 2015

- Solution Developer - Engineering @ Municipality of Milan: nursery-enrollment web app
- Junior Developer - Engineering @ Banca MPS: EJB backend components in a SOA for bank transfers

Education

University of Siena

M.S. & B.S. IN MATHEMATICS

Skills

Architecture & Design

Evolutionary architecture, microservices, modular monolith, event-driven, agentic & LLM-based systems, secure-by-design, tech-debt management

AI-assisted engineering

GitHub Copilot, Claude Code, open-spec (SDD)

Core Stack

Java / Spring / Spring Boot / Spring Batch / JPA

Cloud & Delivery

AWS, Azure, Docker, CI/CD
