

# Tommaso Cortonesi

SOFTWARE ARCHITECT

 j4bberwocky

|  tommaso-cortonesi

## Summary

Software Architect who treats architecture as a living system. I build what's needed now and design for what changes next, delivering pragmatic, evolvable solutions across 16 years in banking and finance.

## Experience

### CCH Tagetik (Wolters Kluwer)

Lucca

LEAD APPLICATION & PRODUCT ARCHITECT

2025 – present

*I own cross-team architecture in a SAFe org (Solutions + Reporting, 7 teams) for a multi-tenant SaaS platform, applying secure-by-design in partnership with the SOC team.*

- I designed the integration of licensed third-party libraries (e.g. Flexmonster) to serve three deployment models — SaaS, BYOC and on-prem — from a single architecture, favoring substitutability over deployment-specific forks.
- I defined and drove a cross-team technical-debt remediation plan, sequencing payback against delivery to keep refactoring sustainable.
- I re-architected an agentic document pipeline by extracting deterministic OCR (Tesseract + PDFBox) into a dedicated microservice instead of one centralized LLM agent — halving production token cost and cutting end-to-end latency ~40% — keeping deterministic and probabilistic components clearly separated (also RAG docs, data lineage).

### Allitude

Trento

LEAD SOLUTION ARCHITECT

2024 – 2025

*I led the modernization of core-banking / Wealth Management services for a banking consortium, coordinating 3 solution architects.*

- I integrated modernized microservices with legacy systems through an incremental, strangler-style approach — designing for replaceability over big-bang rewrite, and using BIAN to keep business domains interchangeable.

### GFT @ Intesa Sanpaolo — Data Governance Portal 2.0

Turin

SOLUTION ARCHITECT

2022 – 2024

*I led the redesign of a bank's data-governance platform across distributed multi-country teams in a regulated environment.*

- I designed a self-registering batch framework (Spring Batch) that centralized job lifecycle, scheduling, monitoring and inter-job dependency control (semaphore), so new jobs only implement their own logic — the suite grew from 4 to ~25 heterogeneous jobs with near-zero per-job integration effort.
- I left a healthy, self-sustaining platform still in active production after my departure — designed to outlive its architect.

### Municipality of Florence

SOLUTION ARCHITECT

2019 – 2021

*I architected and led (team of 4) a web application for building and environmental permits, on the Spring ecosystem with Activiti (BPM) and Alfresco.*

### Banca Mediolanum

SENIOR SOLUTION DEVELOPER & TEAM LEADER

2015 – 2019

*My first leadership role: I led an 8-person team through a COBOL-to-Java transition, planning delivery and interfacing directly with management, architects, bank stakeholders and vendors — and my first hands-on exposure to DevOps.*

### Municipality of Milan

SOLUTION DEVELOPER

2013 – 2015

*Web app for nursery/kindergarten enrollment (JSP, Tomcat).*

### Banca Monte dei Paschi di Siena

JUNIOR SOLUTION DEVELOPER

2010 – 2013

*Backend EJB components within a SOA for bank-transfer services.*

## Education

### University of Siena

M.S. & B.S. IN MATHEMATICS

CERTIFICATIONS: PIVOTAL CERTIFIED SPRING PROFESSIONAL · AWS & GCP (CLOUD FOUNDATIONS)

## Skills

**Architecture & Design** Evolutionary architecture · microservices · modular monolith · event-driven · secure-by-design · tech-debt management

**Core Stack** Java · Spring / Spring Boot / Spring Batch · JPA

**Cloud & Delivery** AWS · GCP · OpenShift · Docker · CI/CD

**Data** Oracle · Sybase · data lake
